Table: A-2: Applications Recommended for Approval	7

1. SECURITY READINESS REVIEW

1.1 General

When conducting an LG Android 5.x Security Readiness Review (SRR), the Team Lead and the assigned Reviewer identify security deficiencies and provide data from which to predict the effectiveness of proposed or implemented security measures associated with the LG Android 5.x platform, its associated network infrastructure, and the individual devices comprising the system.

1.2 Mobile Policy Registration

Detailed policy guidance is available on the DISA Information Assurance Support Environment (IASE) website located at: http://iase.disa.mil/stigs/mobility/Pages/policies.aspx. Use the Mobility Policy STIG to review the General Wireless Policy asset and the CMD Policy STIG to review the Smartphone Handheld asset.

2. LG ANDROID IMPLEMENTATION CONSIDERATIONS

2.1 LG Android Device Disposal

For LG Android devices never exposed to classified data, follow this procedure prior to disposing of (or transferring to another user) a mobile device via site property disposal procedures:

*Follow device manufacturer's instructions for wiping all user data and installed applications from device memory.

2.2 Additional Information

2.2.1 LG Android Operating Environment

The LG Android 5.x platform contains only one operating environment; there are no separate "personal" and "work" environments on the device. Therefore, the device should be considered a work-only device and the use of personal apps on the device should be limited to those with low risk. Sites should determine appropriate personal use policies based on the LG Android 5.x operating environment.

2.2.2 Email Client and Browser Implementation Considerations

The native Android and Chrome browsers and email client are not FIPS 140-2 validated and therefore have been disabled via MDM policy (LGA5-20-003000 & LGA5-20-003100). DoD sites deploying the LG Android 5.x platform should select and install a FIPS 140-2 validated browser and email client. LG Electronics has a FIPS 140-2 validated browser available. Contact support-enterprise-mobility@lge.com for more information.

3. CORE AND PREINSTALLED APPLICATIONS¹

3.1 Disabled Applications

Table A-1 lists core and preinstalled applications that should be disabled. Risk in using these apps in the DoD environment is considered to be high. DoD Commands and Agencies should fully vet these apps, using the Application Software Protection Profile (APPSWPP), prior to approving their use.

3.2 Enabled Applications

Table A-2 lists core and preinstalled applications that are recommended for approval. DoD Commands and Agencies should consider vetting these apps using the Application Software Protection Profile (APPSWPP).

3.3 Auditing/Reviewing Device Applications

Applications are controlled by APIs: application whitelist (install/uninstall) and application blacklist (install/uninstall/launch). The application whitelist and blacklist are used to control installed, core, and preinstalled applications. Approved core and preinstalled applications are added to the whitelist so that updates can be installed. The Blacklist control is used to disable undesirable/unapproved core and preinstalled applications and to disable the capability for installing unapproved applications. Core and preinstalled applications listed on the application blacklist list are not removed from the device but cannot be launched by the user.

The following procedures are recommended for performing an audit/review of applications on LG Android devices:

1. Installed applications

- Review the list of applications listed on the whitelist on the MDM Administration console.
- Verify all apps on the list have been approved by the Approving Official (AO).
 Note: Core and preinstalled applications included in Table A-2 are considered approved for DoD use unless expressly disapproved by the AO.

2. Core and preinstalled applications

- View the blacklist of applications on the MDM console. Tap the "Apps" menu button
 on the LG device to view all installed apps. Verify that all apps on the blacklist
 cannot be launched.
- Generate a list of applications installed on the LG device:
 - Tap the "Apps" menu button on the device to view all installed apps.
 - Remove any app on the whitelist from this list.

¹ A core app is defined as an app bundled by the operating system vendor, for example, Google. A preinstalled app is included on the device by a third-party integrator, including the device manufacturer or cellular service provider, for example, LG, Verizon Wireless, or AT&T.

Note: the whitelist may include approved installed, core, and preinstalled apps.

 Verify all apps remaining on the list of installed applications on the device have been approved by the AO.

APPENDIX A: APPLICATION LISTS

Table: A-1: Applications Recommended for Disapproval
